ABSTRACT OF THE DISCLOSURE

A system, method, and apparatus for decoding and [0057] displaying images utilizing two processors and two memory units. The decode process receives images which are encoded according to a predetermined standard. Included with the encoded images are parameters which facilitate the decode The decode process decodes the and display processes. encoded images and the encoded parameters and stores each image in a separate image buffer, and each set of associated parameters in a buffer descriptor structure associated with The decode process is carried on by the the image buffer. The display process utilizes the first processor. parameters associated with the image to determine the appropriate display order for each image, and then display the image accordingly on a display device, based on the associated parameters. The first processor carries on the display of the image on the display device. processor determines the display order for the images. second processor and the second memory can be off-chip.
